

how to use this stuff

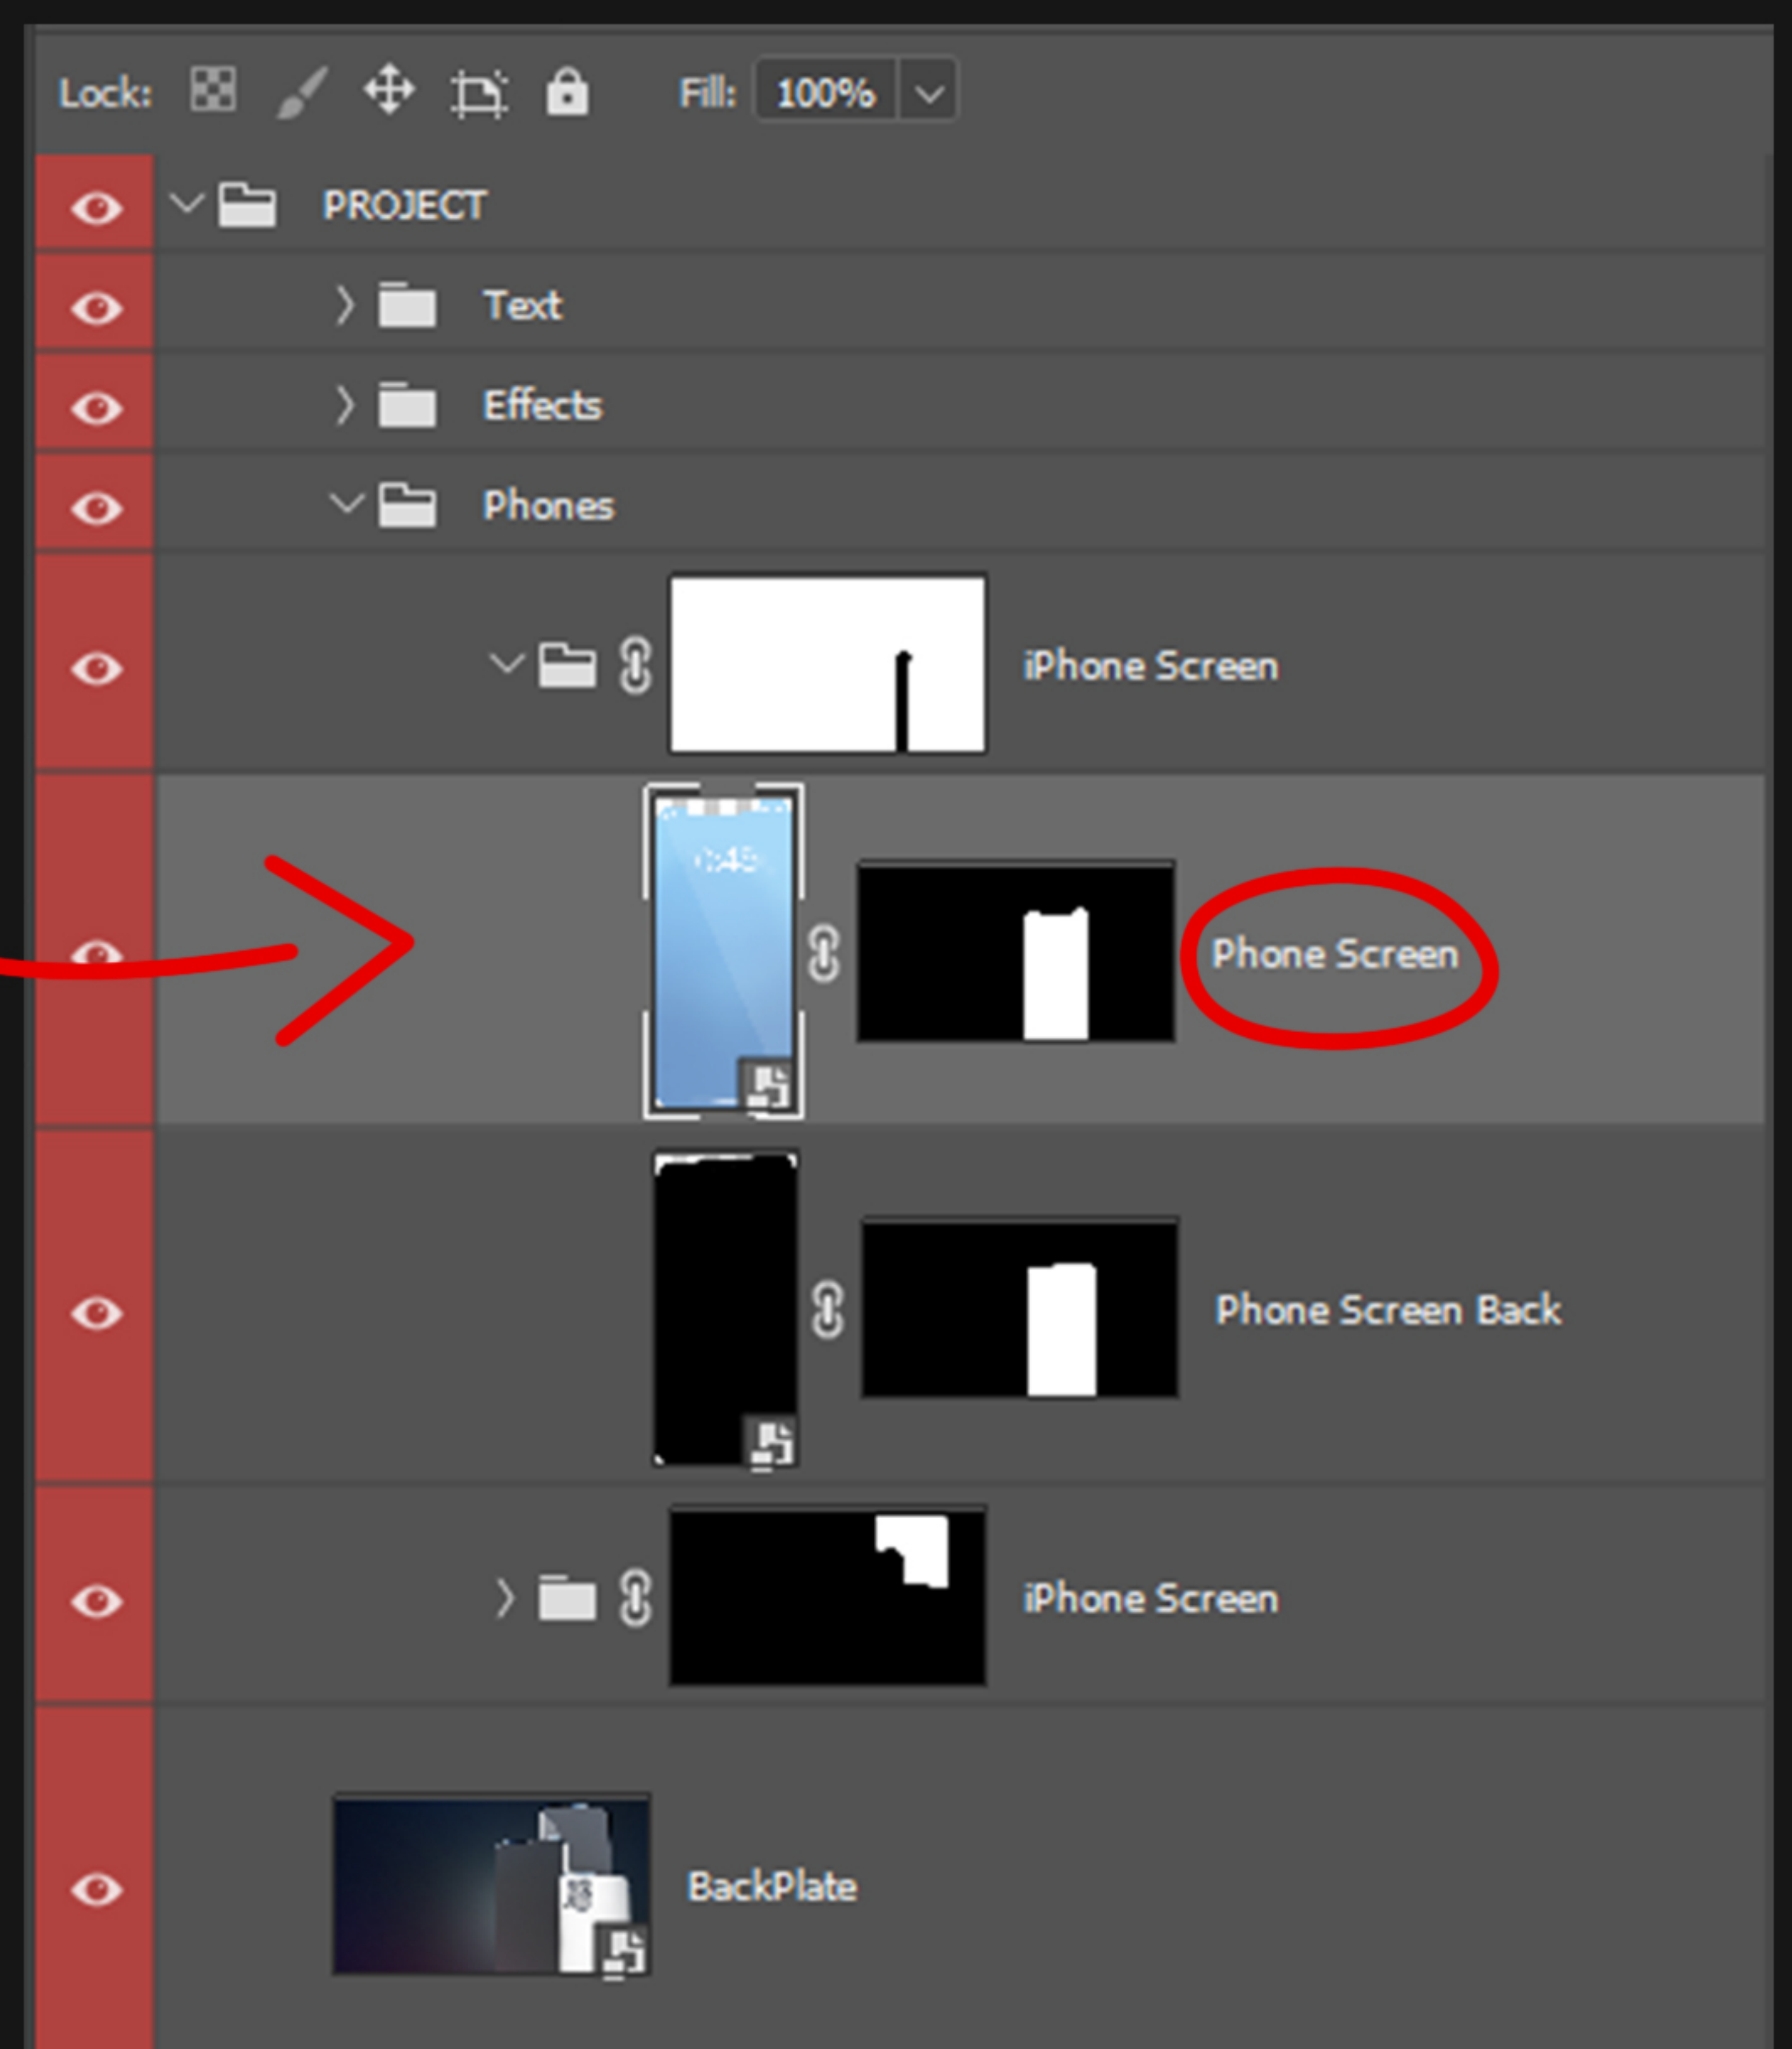

(how to add your design)

1. To add your own design, just double click on the **smart object layer** and a new window opens.

2. Turn off the placeholder layer and create a new one or paste in your design.

3. After you are finished adding in your design, hit **save** and close the window.

4. Photoshop updates your design in the main psd mockup.

(And that's it, you're ready to go.)
